It has been a considerable amount of time since the concept of **batteries** was introduced. The initial batteries and the present state-of-the-art batteries have evolved in various aspects. However, one aspect that has remained unchanged is that all batteries still power applications used by humans in the same way. This newsletter aims to provide an understanding of the basics of battery-related issues. You might be wondering if batteries are so helpful and are aiding in combating climate change, then what is the problem? The answer lies within this newsletter. The biggest challenge that the entire globe is facing is, "**What should be done with used batteries? How can they be recycled?**"
