The declining cost of electric vehicle (EV) batteries is boosting the global supply of EVs and the demand for batteries. Since 2010, the average price of lithium-ion EV battery packs has dropped from USD 1,200/kWh to USD 132/kWh. Typically, each EV battery pack consists of many interconnected modules, housing dozens to hundreds of rechargeable lithium-ion batteries. These batteries usually account for about 77 percent of the total cost of a battery pack, around USD 101/kWh.

The percentage of each component of the electric vehicle battery to the total cost of the battery pack:
